The Evolution Automist Spray Vaccinator triggers a spray each time a box of chicks enters the cabinet. Four spray nozzles ensure that every chick is evenly and completely coated with vaccine:

- Inoculate up to 60,000 chicks per hour with an associated conveyor
- Fully-enclosed chamber minimizes vaccine waste and safely protects operators
- Adjustable spray time, dosage (5.0 – 30.0 mL) and droplet size (75 – 300 μ m) for easy switching of chick sizes and vaccine types with minimum downtime
- No reservoir, healthier chicks: Easier and faster cleaning, with reduced potential for cross-contamination
- Food-grade, corrosion-resistant construction materials help to maximize chick health
- Fast, no-drip shut-off minimizes vaccine wastage
- 100-mesh vaccine filtration in spray nozzle control valves minimizes contamination and maximizes chick survivability

Driven by compressed air, the Evolution Automist Spray Vaccinator can operate in very humid (electricity-hostile) climates and remote locations without power.

[GROUPS](#)

1-11 DAY OLD

[WORLDWIDE](#)

DIMENSIONS

L75 x W90 x H115cms

Weighs approx. 30KGs

Modular construction for easy assembly and maintenance

All stainless steel and food safe materials construction

VACCINE INFORMATION

Dose: 5.0ml-30.0ml

Vaccine Retainer

Adjustable vaccine droplet size from 75Um-300Um

Adjustable volume control

Adjustable time control

4 spray nozzles for complete coverage of chick box

FEATURES

Pressure monitor gauge for air and vaccine

Electronic totalizer with reset

Automatic chick box sensor for automatic spray activation

Automatic shut off of spray nozzle

Drip train with drain tap

12-month warranty and technical assistance
